Database and Tables

| Database Name | Tables |
|---------------|--------|
| 1 | |

Showing 0 to 0 of 0 entries

In total there are 0 connection.

GENERATE EXCEL

Provide input fields where users can Input the host address, port number, username and password credentials of host and port required to access the database

After verifying the host and port, a dropdown menu shows all available databases. Once a database is selected, another dropdown displays its tables for easy selection.

Added Databases and Tables are listed in 'Database and Tables' table

GENERATE EXCEL

This button triggers the completion of the download operation, enabling users to download the spreadsheet file containing the desired data or database information

Download Spreadsheet Template for Database Update

Update Data

When clicked, this button prompts a popup window, enabling users to download a spreadsheet formatted specifically for updating the database.

The pop up window is given below.

The screenshot shows the STM Spreadsheet to MySQL web application interface. At the top, there is a navigation bar with the STM logo, the text "Spreadsheet to MySQL", and links for "HOME", "HOW IT'S WORK", "ABOUT", "LOGIN", and "SIGN IN". The main content area features a large "SPREADSHEET" heading. A modal window is open, containing a form for database connection details. The form includes fields for "Host", "Port", "Username", and "Password", each with a placeholder text "Enter [field name]". A "VERIFY" button is located to the right of these fields. Below these fields are two dropdown menus for "Database" (with placeholder "Select a Database") and "Table". At the bottom of the modal is a large green button labeled "GENERATE EXCEL". Below the modal, the text "Download Spreadsheet" is visible.

Once the host and port are verified with valid credentials, users select the desired database and tables for updating. Clicking on the "**GENERATE EXCEL**" button initiates the download of a spreadsheet
